

ISG Managed Services Perimeter Security

With ransomware damages predicted to hit \$265 billion by 2031, it's clearly becoming more important to protect the IT infrastructure your company depends on to stay in business. But with cyber attacks becoming more sophisticated, more widespread and more frequent, it's becoming exponentially more difficult. **ISG Perimeter Security combats modern security threats by strengthening the first line of defense you need to protect your mission-critical network infrastructure.**

As part of our Perimeter Security Program, we ensure you have a Next-Generation Firewall that is equipped to handle modern security threats with these features and more.

- ✓ *Geolocation*
- ✓ *IDS/IPS*
- ✓ *Antivirus/anti-malware*
- ✓ *Sandboxing*
- ✓ *Web proxy & URL checking*
- ✓ *Reverse proxy*
- ✓ *Web application firewall*
- ✓ *Load balancing*

It's Time to Level Up Your Perimeter Security

Having a Next Generation Firewall (NGFW) is table stakes in today's world. Having a group of highly-trained security professionals that have configured and managed hundreds of firewalls and understand the nuances of the technology is a difference maker. ISG Perimeter Security combines these two to level up your perimeter security.

Configuration & Installation

IGS Security Team configures the device to meet manufacturer best practices as well as your business, industry & compliance-specific requirements.

24x7 Monitoring & Alerting

We review all hardware alerts, status of the network and ensure that firewall configurations are routinely backed. If an alert triggers overnight, we're on it first thing in the morning to ensure your network is working at peak performance.

Vendor Management

No more finger pointing between vendors when an issue occurs. We take full responsibility and work with your ISP, Public DNS and OEMs to resolve the situation - quickly and pain free.

Ongoing Maintenance

Take the day-to-day, mundane management off your plate. We'll make sure your NGFW is configured to meet your needs.

- *Firmware Updates (2x per year)*
- *Event Log Analysis*
- *Black & White Listing*
- *Public DNS & Site Certificate Monitoring*
- *Client VPN Adds/Changes*
- *User Adds/Removes*
- *Site to Site VPN Management*

Security Roadmapping

We work your team to continuously strengthen your organization's security posture through Quarterly Business Reviews and a documented Security Roadmap.
